## Sample Questions and Their Analysis

To understand the nature of the 2012 multiple choice questions, let's examine some representative examples, their concepts, and reasoning strategies.

### Example 1: Mechanics ? Kinematics

Question: A ball is thrown vertically upward with an initial velocity of 10 m/s. Ignoring air resistance, what is the maximum height reached by the ball?

Options:

- a) 5 meters
- b) 10 meters

c) 15 meters

d) 20 meters

Analysis:

This question tests understanding of kinematic equations. The key is recognizing that at the maximum height, the velocity becomes zero. Using  $v^2 = v_0^2 - 2g h$ , where  $v = 0$ ,  $v_0 = 10 \text{ m/s}$ , and  $g = 9.8 \text{ m/s}^2$ :

$$0 = (10)^2 - 2 \times 9.8 \times h$$

$$h = \frac{100}{2 \times 9.8} \approx 5.10 \text{ meters}$$

$$h = \frac{100}{2 \times 9.8} \approx 5.10 \text{ meters}$$

The closest answer is (a) 5 meters.

## Example 2: Electricity and Magnetism

Question: A parallel-plate capacitor is connected to a battery and charged. The plates are then separated further, increasing the distance between them. What happens to the capacitance?

Options:

a) Increases

b) Decreases

c) Remains the same

d) Becomes zero

Analysis:

Capacitance  $C$  for a parallel-plate capacitor is given by:

$$C = \frac{\epsilon_0 A}{d}$$

$$C = \frac{\epsilon_0 A}{d}$$

where  $A$  is the plate area,  $d$  is the separation, and  $\epsilon_0$  is the permittivity of free space. Increasing  $d$  decreases  $C$ . Since the capacitor is connected to a battery (which maintains a constant voltage), the charge decreases as capacitance decreases. The correct answer is (b) decreases.
