Sample UNEB Questions and Answers for Mathematics

This section features representative questions from different topics, along with detailed solutions to help learners understand the approach.

1. Number and Numeration

Question:

Express 0.0456 in scientific notation.

Answer:

To express 0.0456 in scientific notation, identify the significant figures and the power of 10:

- Move the decimal point to the right of the first non-zero digit (4):

4.56

- Count how many places you moved the decimal point:

2 places to the right.

- Since the original number is less than 1, the exponent will be negative:

Scientific notation: 4.56×10^{-2}

Explanation:

Therefore, $0.0456 = 4.56 \times 10^{-2}$.

2. Algebra

Question:

Solve for x: $3x + 5 = 2x ? 7$

Answer:

Starting with the equation:

$3x + 5 = 2x ? 7$

Subtract $2x$ from both sides:

$$3x - 2x + 5 = 7$$

Simplify:

$$x + 5 = 7$$

Subtract 5 from both sides:

$$x = 7 - 5$$

$$x = 2$$

Conclusion:

The solution is $x = 2$.

3. Geometry

Question:

In a triangle ABC, the angles A and B are 50° and 60° , respectively. Find angle C.

Answer:

The sum of angles in a triangle is 180° :

$$A + B + C = 180^\circ$$

Substitute known values:

$$50^\circ + 60^\circ + C = 180^\circ$$

Combine:

$$110^\circ + C = 180^\circ$$

Subtract 110° from both sides:

$$C = 180^\circ - 110^\circ = 70^\circ$$

Result:

Angle C is 70° .

4. Trigonometry

Question:

In a right-angled triangle, if the hypotenuse is 13 units and one of the legs is 5 units, find the value of the other leg.

Answer:

Using the Pythagorean theorem:

$$(\text{Other leg})^2 + 5^2 = 13^2$$

Let x be the other leg:

$$x^2 + 25 = 169$$

Subtract 25 from both sides:

$$x^2 = 169 - 25 = 144$$

Take the square root:

$$x = \sqrt{144} = 12$$

Conclusion:

The other leg measures 12 units.

5. Mensuration

Question:

Calculate the surface area of a cylinder with radius 3 cm and height 10 cm.

Answer:

Surface area (SA) of a cylinder:

$$SA = 2\pi r(h + r)$$

Substitute $r = 3$ cm, $h = 10$ cm, and $\pi \approx 3.14$:

$$SA = 2 \times 3.14 \times 3 (10 + 3)$$

$$= 2 \times 3.14 \times 3 \times 13$$

$$= (2 \times 3.14 \times 3) \times 13$$

$$= (18.84) \times 13$$

$$= 244.92 \text{ cm}^2$$

Result:

The surface area is approximately 244.92 cm².

6. Statistics and Probability

Question:

A bag contains 5 red balls, 3 blue balls, and 2 green balls. If a ball is picked at random, what is the probability that it is blue?

Answer:

Total number of balls:

$$5 + 3 + 2 = 10$$

Number of blue balls = 3

Probability:

$$P(\text{blue}) = \text{Number of blue balls} / \text{Total balls} = 3 / 10 = 0.3$$

Conclusion:

The probability of selecting a blue ball is 0.3 or 30%.
