Dim product As Product

' Set the product to the active document

Set product = CATIA.ActiveDocument.Product

' Perform actions, e.g., display a message

MsgBox "Hello from CATIA VBA!"

End Sub

``
```

This template can be expanded to automate complex tasks.

Core Concepts and Techniques in CATIA VBA

Accessing CATIA Objects

At the heart of CATIA VBA scripting is understanding how to access and manipulate objects within

the application. The primary object is `CATIA`, which represents the application itself. From there, you navigate to documents, products, parts, features, and parameters.

- ActiveDocument: Refers to the currently open document, such as a product or part.
- Products and Parts: Use `ActiveDocument.Product` or `ActiveDocument.Part` to access the geometry.
- Selections: You can select objects within CATIA to manipulate or analyze.

Common Operations in VBA

- Creating and Modifying Geometry: Automate the creation of points, lines, surfaces, and features.
- Parameter Management: Read or update parameters within parts or assemblies.
- File Operations: Save, close, or export documents via scripts.
- Iterating through Collections: Loop through features, bodies, or parameters.

Example: Extracting Parameters from a Part

```
``vba
```

```
Sub GetParameterValue()
```

```
Dim partDoc As PartDocument
```

```
Dim part As Part
```

```
Dim parameters As Parameters
```

```
Dim param As Parameter
```

```
Set partDoc = CATIA.ActiveDocument
```

```
Set part = partDoc.Part
```

```
Set parameters = part.Parameters
```

```
For Each param In parameters
```

```
Debug.Print param.Name & ": " & param.ValueAsString
```

Next

End Sub

...

This script lists all parameters in the active part document in the Immediate window.
