## Core Topics in Physics 12 Nelson

### Kinematics and Dynamics: The Basics of Motion

Kinematics involves describing how objects move, focusing on quantities like displacement, velocity, and acceleration. Dynamics explains why objects move as they do, emphasizing forces and Newton's laws.

- Displacement and Velocity: Understanding how an object's position changes over time.
- Acceleration: Rate of change of velocity, including constant and variable acceleration.
- Newton's Laws: The foundation for understanding the relationship between forces and motion:

- An object at rest stays at rest; an object in motion stays in motion unless acted upon by an external force.

- Force equals mass times acceleration ( $F=ma$ ).
- For every action, there is an equal and opposite reaction.

These principles are essential for analyzing everything from vehicle motion to celestial mechanics.

### Forces and Newton's Laws

Exploring forces involves examining different types:

- Contact Forces: Friction, tension, normal force.
- Field Forces: Gravity, electromagnetic forces.

Students learn to analyze forces using free-body diagrams, which visually represent the forces acting on an object. This helps in solving problems related to equilibrium, acceleration, or tension.

### Work, Energy, and Power

This section introduces the concept of energy conservation and transformation:

- Work: Product of force and displacement in the direction of force.
- Kinetic and Potential Energy: Energy due to motion and position.

- Mechanical Energy: Sum of kinetic and potential energy, conserved in isolated systems.
- Power: Rate at which work is done.
