Sample Earthworm Lab Questions and Answer Key

Below are some typical questions encountered in an earthworm lab, along with detailed answers to guide your understanding.

Question 1: What is the function of the clitellum?

Answer:

The clitellum is a thick, glandular band that secretes mucus during reproduction. It plays a crucial role in forming the cocoon that contains fertilized eggs and aids in the earthworm's mating process.

Question 2: Identify the location and function of the gizzard.

Answer:

The gizzard is located just posterior to the crop. It is a muscular structure that grinds food particles, often with the aid of soil or grit ingested by the worm, facilitating digestion.

Question 3: Describe the pathway of food through the digestive system of an earthworm.

Answer:

The pathway begins at the mouth, leading to the pharynx, then to the esophagus, crop, gizzard, and finally the intestine. Nutrients are absorbed in the intestine, and undigested material passes out through the anus.

Question 4: What structures make up the earthworm's circulatory system?

Answer:

The circulatory system consists of five pairs of aortic arches (commonly called "hearts"), a dorsal

blood vessel that runs along the back, and a ventral blood vessel that runs along the belly. These vessels circulate blood throughout the body.

Question 5: Explain the role of nephridia in earthworms.

Answer:

Nephridia are excretory organs that remove nitrogenous wastes from the earthworm's body fluids. They are located in each segment and help maintain osmotic balance.

Additional Tips for Earthworm Dissection and Study
