Setting Up Your Development Environment

Why Use NetBeans IDE?

NetBeans is a popular Java IDE known for its user-friendly interface, built-in tools, and support for various Java technologies. It simplifies project management and debugging, making it ideal for developing desktop applications like inventory systems.

Prerequisites

- Java Development Kit (JDK): Ensure JDK 8 or higher is installed.
- NetBeans IDE: Download and install the latest version compatible with your system.
- Database Management System (DBMS): MySQL, SQLite, or similar for storing inventory data.
- Basic Java Knowledge: Familiarity with Java syntax, Swing, JDBC.

Setting Up the Database

Create a database to store product details, stock levels, suppliers, and transactions. For example, using MySQL:

```
```sql
```

```
CREATE DATABASE shop_inventory;
```

```
USE shop_inventory;
```

```
CREATE TABLE products (
```

```
id INT PRIMARY KEY AUTO_INCREMENT,
```

```
name VARCHAR(100),
```

description TEXT,

quantity INT,

price DECIMAL(10, 2),

supplier VARCHAR(100),

reorder\_level INT

);

...

## Designing the Inventory Management System

### Core Features to Implement

A comprehensive inventory system should include:

- Product Management:
  - Add, edit, delete product details.
- Stock Control:
  - Track current stock levels.
  - Update quantities upon sales or restocking.
- Search and Filter:
  - Find products by name, category, or ID.
- Reports and Analytics:
  - Stock reports.
  - Low stock alerts.
  - Sales summaries.
- User Management (Optional):
  - Different access levels for staff.
- Backup and Restore:
  - Data safety features.

### System Architecture

The system can follow a layered architecture:

- Presentation Layer: Java Swing GUI for user interaction.
- Business Logic Layer: Handles data validation, processing.
- Data Access Layer: JDBC for database operations.

## Developing the Application in NetBeans

### Step 1: Create a New Java Project

- Open NetBeans.
- Select File > New Project.
- Choose Java Application.
- Name your project (e.g., "ShopInventorySystem").
- Select Create Main Class.

### Step 2: Design the User Interface

Use Swing components for the GUI:

- JFrame: Main window.
- JPanel: Sections for different functionalities.
- JTable: Display product lists.
- JTextFields: Input fields for product info.
- JButtons: Add, update, delete, search.
- JLabels: Labels for inputs and headings.

Leverage NetBeans' GUI Builder (Matisse) to drag and drop components for rapid interface design.

### Step 3: Implement Database Connectivity

Create a separate class for database connection:

```
```java
```

```
public class DatabaseConnection {
```

```
    private static final String URL = "jdbc:mysql://localhost:3306/shop_inventory";
```

```
    private static final String USER = "root";
```

```
private static final String PASS = "your_password";

public static Connection getConnection() throws SQLException {

return DriverManager.getConnection(URL, USER, PASS);

}

}

...

```

Step 4: Create Data Access Object (DAO) Classes

Define classes to handle CRUD operations. Example for products:

```
```java

```

```
public class ProductDAO {

public boolean addProduct(Product product) {

String sql = "INSERT INTO products (name, description, quantity, price, supplier, reorder_level)
VALUES (?, ?, ?, ?, ?, ?)";

try (Connection conn = DatabaseConnection.getConnection());

PreparedStatement pstmt = conn.prepareStatement(sql)) {

pstmt.setString(1, product.getName());

pstmt.setString(2, product.getDescription());

pstmt.setInt(3, product.getQuantity());

pstmt.setDouble(4, product.getPrice());

pstmt.setString(5, product.getSupplier());

pstmt.setInt(6, product.getReorderLevel());

```

```
return pstmt.executeUpdate() > 0;

} catch (SQLException e) {

e.printStackTrace();

return false;

}

}

// Implement update, delete, search methods similarly.

}

...

```

### Step 5: Implement Business Logic

Link GUI actions with DAO methods:

- On "Add Product" button click, gather data from input fields and call `addProduct()`.
- Refresh the product table after each operation.

### Step 6: Display Data in JTable

Fetch data from the database:

```
```java

public void loadProductData() {

String sql = "SELECT FROM products";

try (Connection conn = DatabaseConnection.getConnection());

Statement stmt = conn.createStatement();

ResultSet rs = stmt.executeQuery(sql)) {

```

```
DefaultTableModel model = (DefaultTableModel) productTable.getModel();

model.setRowCount(0);

while (rs.next()) {

    Object[] row = {

        rs.getInt("id"),

        rs.getString("name"),

        rs.getString("description"),

        rs.getInt("quantity"),

        rs.getDouble("price"),

        rs.getString("supplier"),

        rs.getInt("reorder_level")

    };

    model.addRow(row);

}

} catch (SQLException e) {

    e.printStackTrace();

}

}

...

```

Enhancing the System

Adding Features

- Low Stock Alerts: Notify when stock drops below reorder level.
- Barcode Integration: For quick product lookup.
- Sales Module: Track sales and deduct from inventory.
- User Authentication: Secure access for staff.
- Reports & Export: Generate PDF or Excel reports.

Improving User Experience

- Use clear labels and organized layouts.
- Implement validation to prevent incorrect data entry.
- Include confirmation dialogs before delete actions.
- Provide search filters for quick access.

Testing and Deployment

Testing

- Conduct unit tests for DAO methods.
- Perform integration testing for GUI interactions.
- Simulate typical user workflows.
- Handle exceptions gracefully.

Deployment

- Package the application as a JAR.
- Distribute with database setup instructions.
- Consider creating an installer for ease.
