## Sample SHL Mechanical Comprehension Questions and Answers

Below are some sample questions with detailed explanations to illustrate how to approach and find the correct answers.

### Question 1: Leverage and Mechanical Advantage

**Question:** A seesaw is balanced with a 10 kg child sitting 2 meters from the fulcrum on one side. How far from the fulcrum should a 15 kg child sit to balance the seesaw?

**Answer:** To balance the seesaw, the torque on both sides must be equal.

Torque = Force  $\times$  Distance

- Left side:  $10 \text{ kg} \times 2 \text{ m} = 20 \text{ kg}\cdot\text{m}$
- Right side:  $15 \text{ kg} \times x = 20 \text{ kg}\cdot\text{m}$

> Solving for x:

>  $15 \text{ kg} \times x = 20 \text{ kg}\cdot\text{m}$

>  $x = 20 / 15 = 1.33 \text{ meters}$

Correct answer: Approximately 1.33 meters from the fulcrum.

### Question 2: Pulley Systems

**Question:** In a single fixed pulley system, how much effort is needed to lift a 100 kg load? Assume gravity is  $9.8 \text{ m/s}^2$ .

**Answer:** In a fixed pulley, the effort required equals the weight of the load.

Weight = mass  $\times$  gravity =  $100 \text{ kg} \times 9.8 \text{ m/s}^2 = 980 \text{ N}$

Correct answer: 980 Newtons effort is needed.

### Question 3: Gears and Gear Ratios

**Question:** A gear with 20 teeth drives a gear with 40 teeth. What is the gear ratio, and how does it affect the speed?

**Answer:** Gear ratio = Number of teeth on driven gear / Number of teeth on driver gear =  $40 / 20 = 2$ .

This means the driven gear turns at half the speed of the driver gear, providing a mechanical advantage in torque but reducing speed by a factor of 2.

The questions are designed to assess practical understanding through visual diagrams, mechanical scenarios, and problem statements.

Common question types include:

- Identifying the function of mechanical devices
- Predicting the outcome of mechanical interactions
- Calculating mechanical advantage
- Understanding the movement of gears, pulleys, and levers
- Interpreting diagrams of mechanical systems

## Deciphering the Answer Patterns in the SHL Mechanical Test

### Common Mechanical Principles Tested

The core principles frequently examined in this test include:

- Levers: Mechanical advantage, fulcrum position
- Pulleys: Number of pulleys, tension, and load distribution
- Gears: Gear ratios, direction of rotation
- Inclined Planes: Force and effort calculations
- Friction and Resistance: Effects on movement
- Force and Motion: Newtonian mechanics, acceleration

Understanding these principles is fundamental in deducing correct answers and recognizing patterns in question types.

### Typical Answer Patterns and Strategies

While specific answer keys vary with each test version, certain patterns and strategies can be identified:

- Elimination Technique: Discard obviously incorrect options, narrowing down choices.
- Pattern Recognition: Many questions revolve around predictable mechanical relationships?if a gear turns clockwise, the gear it meshes with turns counterclockwise, etc.
- Visual Analysis: Diagrams often follow logical configurations; recognizing the standard arrangement can expedite answer selection.
- Common Pitfalls: Some questions aim to test overthinking; answers often follow straightforward mechanical principles, not complex calculations.

Example Patterns:

| Question Type   Typical Correct Answer Pattern   Explanation                                                |
|-------------------------------------------------------------------------------------------------------------|
| ----- ----- -----                                                                                           |
| Gear interactions   Opposite directions for meshing gears   Gears in contact rotate in opposite directions. |
| Pulley systems   Mechanical advantage increases with added pulleys   More pulleys reduce effort needed.     |
| Levers   Fulcrum closer to load increases effort   Mechanical advantage relates to fulcrum position.        |
| Inclined planes   Less force needed with longer slope   Force is inversely proportional to slope length.    |

## Analyzing Sample Questions and Their Answers

To illustrate the answer patterns, let's examine some typical questions and provide detailed reasoning.

### Sample Question 1: Gear Rotation

Question:

Two gears are meshed. Gear A has 20 teeth and rotates clockwise. What is the direction of Gear B's rotation?

Options:

- A) Clockwise
- B) Counterclockwise
- C) Cannot determine
- D) Both gears are stationary

Answer: B) Counterclockwise

Analysis:

Gears that mesh rotate in opposite directions. Since Gear A rotates clockwise, Gear B must rotate counterclockwise. This pattern is consistent across gear systems and forms a fundamental principle in mechanical reasoning.

## Sample Question 2: Pulley System

Question:

In a pulley system with four pulleys, the effort required to lift a load of 100 kg is reduced by a factor of?

Options:

- A) 1
- B) 2
- C) 4
- D) 8

Answer: C) 4

Analysis:

A multi-pulley system's mechanical advantage equals the number of supporting ropes. In this case, four pulleys support the load, so the effort is approximately one-fourth of the load's weight, assuming

ideal conditions. Therefore, the effort is reduced by a factor of 4.

### Sample Question 3: Lever Balance

Question:

A fulcrum is placed 2 meters from the load and 8 meters from the effort. What is the mechanical advantage?

Options:

- A) 2
- B) 4
- C) 8
- D) 16

Answer: B) 4

Analysis:

Mechanical advantage = effort arm / load arm =  $8\text{m} / 2\text{m} = 4$ . The longer effort arm relative to the load arm provides a fourfold advantage.

## Strategies for Success: Preparing for the SHL Mechanical Test

While knowing the answer patterns is valuable, effective preparation involves understanding core principles and practicing under timed conditions.
