- Heating Process:

The heating system combusts fuel in the boiler chamber, transferring heat to the water via a heat exchanger. This process elevates water temperature, which enhances the breakdown of grease, oils, and grime on surfaces.

- Pressure and Temperature Control:

Operators can adjust pressure and temperature settings according to cleaning needs. For delicate surfaces, lower pressure and temperature are used, while heavy-duty tasks benefit from higher settings.

- Spray Application:

The pressurized, heated water is expelled through nozzles, creating a jet stream capable of dislodging stubborn dirt. Different nozzles can be attached for varied spray patterns ranging from narrow fan jets to wide spray.

- Safety and Efficiency:

Built-in safety features, such as pressure relief valves and temperature limiters, prevent over-pressurization and overheating, ensuring safe operation.
