Objective Sample Question

Which of the following is NOT a landform created by river erosion?

- a) V-shaped valley

b) Delta

c) Meander

d) Floodplain

Answer: b) Delta

Essay Sample Question

Explain the process of river meander formation and its significance in landscape development.

Sample Answer:

River meanders are sinuous curves or bends in a river channel that develop over time due to the lateral erosion of the riverbanks. The formation begins when the flow of the river erodes the outer banks of a bend, creating a cut bank, while deposition occurs on the inner banks, forming point bars. This process continues, accentuating the bends and creating prominent meanders. These features are significant because they influence landform development, affect floodplain creation, and impact human settlement patterns by shaping fertile lands along river valleys.
