 - Repeatability: Variation when the same operator measures the same part multiple times.
 - Reproducibility: Variation between different operators measuring the same part.
 - Total Gage R&R: Combined effect of repeatability and reproducibility.
- Interpretation:
 - Gage R&R variation should be a small percentage of the total process variation (commonly less than 10%).
 - High Gage R&R indicates a need to improve the measurement system.

Bias and Linearity Studies

- Bias Study: Compares the measurement device against a known standard to identify systematic errors.
- Linearity Study: Assesses whether measurement bias varies across the measurement range.

Stability Analysis

- Tracks measurement variation over time to detect drift or environmental effects.
