PIT AND DUMP DESIGN IN SURPAC Tutorial

pit and dump design in surpac is an essential aspect of modern mining engineering, enabling professionals to efficiently plan and optimize open-pit mining operations. Surpac, a comprehensive geological modeling and mine planning software developed by Dassault Systèmes GEOVIA, provides a robust platform for designing, analyzing, and optimizing pit and dump configurations. Harnessing surpac?s powerful tools allows mining engineers to create accurate, economical, and safe pit designs that maximize resource recovery while minimizing environmental and operational risks.

In this article, we will delve into the fundamental concepts of pit and dump design in surpac, explore the step-by-step process involved, and highlight best practices to ensure optimal outcomes. Whether you are a seasoned geologist, mine planner, or a student venturing into mining engineering, understanding how to leverage surpac for pit and dump design is crucial for efficient mine development.

Understanding Pit and Dump Design in Surpac

What is Pit and Dump Design?

Pit and dump design refers to the strategic planning of open-pit mines, focusing on the layout and geometry of the mineral deposit?s excavation. It involves determining the optimal shape, size, and location of the pit, as well as designing waste dumps to store overburden and waste material. Effective pit and dump design aims to maximize mineral extraction, ensure safety, minimize environmental impact, and optimize operational costs.

The Role of Surpac in Pit and Dump Design

Surpac facilitates comprehensive pit and dump design through its intuitive interface and advanced modeling capabilities. Key features include:

- 3D visualization of geological and geotechnical data
- Automated pit shell generation
- Optimization algorithms for pit expansion and sequencing
- Waste dump layout planning
- Integration with scheduling and cost estimation modules

These tools enable engineers to simulate various scenarios, analyze trade-offs, and select the most

viable options for development.

Step-by-Step Process for Pit and Dump Design in Surpac

Designing an effective pit and dump layout in surpac involves several interconnected steps. Below is a detailed workflow to guide practitioners through the process.

1. Data Collection and Preparation

Before starting the design, gather all relevant data:

- Geological models (block models, drill hole data)
- Topographical surveys
- Geotechnical and hydrogeological data
- Mineral resource estimates
- Environmental constraints

Ensure data is clean, correctly georeferenced, and integrated into surpac?s database.

2. Geological Modeling and Resource Estimation

Create detailed geological models to understand the distribution of mineralization:

- Generate 3D block models
- Classify resource categories
- Validate models with sampling data

Accurate modeling informs the subsequent design decisions.

3. Defining the Pit Shells

Pit shell creation is central to the design:

- Use the ?Pit Optimization? tool to generate economic shells based on parameters such as:
- Metal prices
- Operating costs
- Geotechnical constraints
- Pit slopes

- Adjust parameters iteratively to explore different scenarios

The optimized shell indicates the most profitable pit outline.

4. Designing the Final Pit Layout

Convert the selected shell into a detailed design:

- Define bench heights and slopes
- Design access ramps and haul roads
- Incorporate safety and environmental buffers
- Use the ?Pit Design? module to refine the shape and geometry

Ensure compliance with safety standards and operational constraints.

5. Waste Dump and Tailings Storage Planning

Design waste dumps considering:

- Location relative to the pit
- Geotechnical stability
- Environmental impact
- Capacity requirements

Use surpac?s tools to model waste dump geometries and integrate them with the overall mine plan.

6. Scheduling and Optimization

Integrate pit and dump designs into mine scheduling:

- Sequence phases for optimal resource recovery
- Balance waste removal with mineral extraction
- Minimize stripping ratios

Leverage surpac?s scheduling modules for scenario analysis.

7. Final Review and Validation

Conduct thorough reviews:

- Visual inspection of 3D models
- Check for conflicts with environmental or safety constraints
- Perform geotechnical stability assessments
- Prepare reports and documentation

Key Features of Surpac for Pit and Dump Design

Automated Pit Shell Generation

Surpac enables users to generate multiple pit shells based on varying economic parameters. This automation helps identify the most profitable options and supports sensitivity analysis.

3D Visualization and Modeling

The software?s 3D environment provides clear visualization of geological models, pit outlines, waste dumps, and infrastructure, facilitating better decision-making.

Design Modules and Tools

- Pit Design: Allows detailed shaping of pit contours, benching, and ramp design
- Waste Dump Design: Tools to model and analyze waste storage facilities
- Optimization Algorithms: Support scenario analysis and resource maximization

Integration and Data Management

Surpac integrates geological, geotechnical, and environmental data, ensuring consistency across the design process.

Best Practices for Effective Pit and Dump Design in Surpac

- **Thorough Data Validation:** Regularly update and verify all geological and survey data to avoid errors in design.
- **Scenario Analysis:** Explore multiple pit shells and dump layouts to identify the most profitable and sustainable options.
- **Consider Safety and Environmental Constraints:** Incorporate buffer zones, slope stability considerations, and environmental restrictions early in the design process.

- **Engage Multidisciplinary Teams:** Collaborate with geotechnical engineers, environmental scientists, and operations staff for comprehensive planning.
- **Leverage Automation:** Use surpac?s automation features for repetitive tasks, ensuring consistency and efficiency.
- **Conduct Regular Reviews:** Continuously review and update designs based on new data, operational feedback, and technological advancements.

Conclusion

Pit and dump design in surpac is a vital component of successful open-pit mining operations. By utilizing surpac?s advanced modeling tools, automation features, and scenario analysis capabilities, mining engineers can develop optimized, safe, and environmentally responsible mine layouts. A systematic approach?starting from data collection to detailed design and validation?ensures that the final plan aligns with economic goals, safety standards, and environmental commitments. Mastery of surpac?s pit and dump design features empowers professionals to enhance productivity, reduce costs, and contribute to sustainable mining practices.

Whether you are just beginning your journey in mine planning or seeking to refine your skills, understanding the nuances of pit and dump design in surpac will significantly improve the quality and viability of your projects.

Pit and Dump Design in Surpac: A Comprehensive Guide for Mining Professionals

Designing open-pit mines involves a complex interplay of geology, engineering, environmental considerations, and economic factors. Among the critical steps in the mining planning process is pit and dump design in Surpac, a powerful software suite widely used by geologists and mining engineers worldwide. Surpac offers robust tools and functionalities for creating efficient, optimized pit designs that maximize resource recovery while ensuring safety and cost-effectiveness. This article provides a detailed, step-by-step guide to pit and dump design in Surpac, highlighting best practices, key features, and practical tips to help professionals leverage the software effectively.

Understanding the Importance of Pit and Dump Design in Surpac

Before diving into the technical aspects, it?s essential to appreciate why pit and dump design is vital. Proper design impacts:

- Operational efficiency: Well-planned pits reduce haulage distances and optimize material movement.
- Safety: Proper slope angles and bench configurations prevent slope failures.
- Economic viability: Maximizing resource extraction while minimizing waste removal costs.

- Environmental management: Planning dumps and waste disposal to minimize environmental impact.

Surpac?s integrated environment allows users to model, analyze, and optimize these aspects with precision.

Overview of Pit Design in Surpac

Pit design in Surpac involves creating a three-dimensional model of the open pit that reflects the geological data, resource boundaries, and engineering parameters. It typically includes:

- Defining the ore body and waste zones
- Establishing ultimate pit limits
- Designing bench configurations and slope angles
- Generating the final pit shell

Step 1: Data Preparation and Import

Start with accurate and comprehensive data:

- Geological models: 3D wireframes or block models representing ore and waste zones.
- Topographical data: Surface models (DTMs or point clouds).
- Resource data: Grade models and economic parameters.

Import these datasets into Surpac:

- Use the Import function for surfaces, point clouds, and block models.
- Verify data quality and coordinate systems.

Step 2: Creating a Block Model or Wireframe

A precise 3D model forms the foundation:

- Develop a block model representing the ore body, including grade and volume.
- Alternatively, import existing geological wireframes.
- Ensure the model accurately reflects the geological structure and resource boundaries.

Step 3: Defining Pit Shells

The ultimate pit shell is the boundary that encloses the economically viable part of the deposit:

- Use the Pit Optimization tool in Surpac, which applies economic parameters like mining costs, metal prices, and recovery rates.
- Set up constraints such as maximum slope angles, bench heights, and ramp widths.
- Run the optimization to generate a series of nested shells, each representing different economic scenarios.

Step 4: Selecting the Final Pit Shell

From the generated shells:

- Choose the shell that maximizes profit while adhering to safety and operational constraints.
- Use the Pit Limit feature to visualize and analyze the selected shell.
- Adjust parameters if necessary to optimize the design.

Step 5: Designing Bench and Slope Configurations

Designing practical and safe benches involves:

- Setting a bench height (commonly 5?15 meters depending on equipment and geology).
- Defining benches at regular intervals along the slope.
- Applying slope angles based on rock mass strength, geological conditions, and safety standards.
- Surpac allows for setting these parameters within the pit design module, which automatically generates the bench layout.

Step 6: Incorporating Ramp Design

Proper ramp design ensures efficient access:

- Define ramp widths based on fleet size and safety regulations.
- Position ramps to minimize haul distances.
- Use Surpac?s Ramp Design tools to generate options and analyze impacts.

Dump Design in Surpac

After establishing the pit, waste management through dump design is essential:

- Identify suitable locations for waste dumps, considering topography, environmental restrictions, and geotechnical stability.
- Use Surpac to model dump boundaries as polygons or wireframes.
- Design dump benches and slopes, ensuring stability.
- Plan for progressive reclamation and potential future use.

Practical Tips for Pit and Dump Design in Surpac

- Iterative Approach: Continuously refine your pit and dump models based on geological updates, economic changes, or safety considerations.
- Use 3D Visualization: Leverage Surpac?s 3D environment to visualize pit shells, benches, ramps, and dumps comprehensively.
- Perform Slope Stability Analysis: Integrate geotechnical data and stability models to optimize slope angles.
- Optimize Economically: Use the Economic Evaluation tools within Surpac to compare different pit shells and dump configurations.
- Data Management: Maintain well-organized data layers and coordinate systems for seamless integration.

Advanced Features and Customization

Surpac offers advanced options for experienced users:

- Custom Scripts and Macros: Automate repetitive tasks like iterative slope adjustments.
- Integration with Other Software: Export models to geotechnical or hydrological analysis tools.
- Dynamic Modeling: Incorporate future expansion plans or variable geological conditions.

Final Checks and Documentation

Before finalizing your design:

- Review all models thoroughly.
- Cross-validate with geological and geotechnical reports.

- Document assumptions, parameters, and decision points for stakeholder review.

Conclusion

Pit and dump design in Surpac is a critical component of mine planning that combines geological modeling, engineering principles, and economic analysis within a single platform. Mastery of these processes enables mining professionals to develop safe, efficient, and profitable open-pit operations. By following systematic steps?from data import and resource modeling to optimization and detailed design?users can harness Surpac?s full capabilities to create robust mine plans tailored to their specific project needs.

Whether you are a seasoned mine planner or just starting, understanding and applying best practices in pit and dump design in Surpac will significantly enhance your operational outcomes and contribute to sustainable mining practices.

QuestionAnswer What are the key steps involved in designing a pit and dump in Surpac? The key steps include importing geological and resource data, creating block models, designing optimal pit shells using economic parameters, developing pit slopes and benches, and finally integrating dump design for waste management within Surpac. How does Surpac assist in optimizing pit and dump designs for economic efficiency? Surpac offers tools for resource modeling, grade estimation, and pit optimization algorithms that help in determining the most economical pit outlines, while also considering dump placement to reduce haul distances and improve overall project economics. Can Surpac's pit and dump design process incorporate environmental and safety constraints? Yes, Surpac allows users to input various constraints such as environmental restrictions, slope stability, and safety parameters, enabling the creation of designs that comply with regulations and mitigate risks. What are the common challenges faced during pit and dump design in Surpac, and how can they be addressed? Common challenges include accurately modeling complex geology, balancing economic and safety considerations, and managing data integration. These can be addressed through detailed data validation, iterative design processes, and utilizing Surpac's advanced modeling and optimization tools. How does integrating dump design in Surpac improve overall mine planning? Integrating dump design ensures efficient waste management, reduces haul distances, and optimizes material movement, leading to cost savings and improved scheduling within the comprehensive mine plan developed in Surpac.

Open pit mine design surpac tutorial

open pit mine design surpac tutorial has become an essential resource for geologists, mining engineers, and students seeking to understand how to effectively utilize Surpac software for open pit mining projects. Surpac, developed by Dassault Systèmes GEOVIA, is a powerful mine planning and modeling tool that offers a comprehensive suite of features for resource modeling, pit optimization, design, scheduling, and reporting. This tutorial aims to guide users through the fundamental steps of open pit mine design within Surpac, providing practical insights and detailed instructions to enhance your workflow and decision-making process.

Understanding the Basics of Surpac for Open Pit Mining

Before diving into the design process, it?s important to understand the core components and functionalities of Surpac related to open pit mining.

What is Surpac?

Surpac is a versatile mining software that allows users to visualize, model, and analyze geological data. Its user-friendly interface and extensive tools make it suitable for various stages of mine planning, from resource estimation to detailed pit design.

Key Features Relevant to Open Pit Mine Design

- Resource modeling and grade estimation
- Digital terrain modeling (DTM)
- Pit optimization and shell generation
- Detailed pit design and reporting
- Scheduling and simulation tools

Preparing Data for Open Pit Design in Surpac

Effective open pit design begins with accurate and well-organized data.

Gathering and Importing Data

- Geological Data: Drill hole data, geological models, and mineralization zones.
- Topographical Data: Digital Elevation Models (DEMs) or survey data.
- Assay Data: Grade and quality measurements.
- Other Data: Geotechnical information, hydrology, and infrastructure.

Steps to import data:

- Open Surpac and create a new project.
- Use the 'File' menu to import drill hole data (e.g., CSV, DXF, or DXF).
- Import topography data to create a DTM.
- Load geological and grade models.

Creating a Digital Terrain Model (DTM)

- Use the 'Create DTM' function.
- Select your topographical data.
- Generate a surface that accurately reflects the terrain for pit design.

Resource Modeling and Grade Estimation

Accurate resource models are crucial for defining the pit boundaries and ensuring economic viability.

Building a Geological Model

- Use drill hole data to interpolate mineralization zones.
- Apply grade estimation techniques such as inverse distance weighting (IDW) or kriging.
- Validate the model with cross-validation methods.

Defining Block Models

- Create a block model to represent ore and waste.
- Assign grades based on the geological model.
- Use the 'Block Model' tool in Surpac for detailed resource representation.

Open Pit Optimization and Shell Generation

This is a vital step in determining the most profitable pit limits based on economic and geotechnical parameters.

Using Pushbacks and Pit Shells

- Surpac offers tools like the 'Pit Optimization' module (or third-party plugins) for shell generation.
- Input parameters such as metal prices, mining costs, processing costs, and recoveries.
- Generate optimal pushbacks that maximize profit.

Steps for Pit Shell Generation

- Define the economic parameters in the software.
- Run the pit optimization algorithm to produce a series of shells.
- Select the shell that offers the best balance between size and economic return.

Designing the Open Pit in Surpac

Once the optimal shell is identified, you can proceed to detailed pit design.

Creating the Final Pit Outline

- Import the selected pit shell into Surpac.
- Use the 'Create Pit Design' tool to delineate the final boundaries.
- Incorporate geotechnical parameters, such as slope angles, to ensure stability.

Designing Pit Walls and Bench Heights

- Define bench heights based on equipment and safety considerations.
- Set wall slopes according to geotechnical data.
- Use the 'Design Pit Walls' feature to generate detailed wall profiles.

Adding Geotechnical and Hydrological Constraints

- Integrate slope stability data.
- Adjust pit walls considering groundwater and drainage requirements.
- Ensure compliance with safety standards.

Scheduling and Finalizing the Mine Plan

After designing the pit, planning the extraction sequence ensures operational efficiency.

Production Scheduling

- Use Surpac?s scheduling tools to simulate extraction sequences.
- Prioritize high-grade zones and optimize stripping ratios.

- Incorporate equipment constraints and access considerations.

Final Visualization and Reporting

- Generate 3D visualizations of the pit design.
- Export drawings and reports for stakeholder review.
- Use Surpac?s reporting tools to document volume estimates, grades, and economic analyses.

Tips and Best Practices for Effective Open Pit Design in Surpac

- Always verify data accuracy before modeling.
- Regularly validate models with field data.
- Use multiple scenarios to evaluate different pit configurations.
- Incorporate geotechnical and hydrological data early in the design.
- Keep documentation organized for easy updates and revisions.

Conclusion

Mastering open pit mine design in Surpac requires a systematic approach that combines accurate data collection, resource modeling, optimization, and detailed design. This tutorial provides a foundational framework to guide new users through each stage, from importing data to final pit scheduling. As you become more familiar with Surpac?s capabilities, you'll be able to customize your workflow for complex projects and improve the efficiency and safety of your open pit mining operations. With practice and continuous learning, Surpac can become an invaluable tool in achieving successful and sustainable mine designs.

Open Pit Mine Design Surpac Tutorial: A Comprehensive Guide for Mining Engineers and Students

Open pit mine design is a complex and critical phase in the mining project lifecycle, requiring a combination of geological understanding, geotechnical analysis, and advanced software tools. Among these tools, Surpac stands out as one of the most widely used and versatile software packages in the mining industry. The Open Pit Mine Design Surpac Tutorial aims to provide a detailed, step-by-step overview of how to utilize Surpac for designing efficient, safe, and economically viable open pit mines. Whether you are a beginner or an experienced professional, this tutorial will help you grasp core concepts, workflows, and best practices for open pit mine design using Surpac.

Introduction to Surpac for Open Pit Mine Design

Surpac is a comprehensive software suite developed by Dassault Systèmes Geovia, tailored for geological modeling, resource estimation, and mine planning. Its open-pit design module offers powerful tools to model the pit, optimize layouts, and perform detailed scheduling. The software?s intuitive interface combined with robust functionalities makes it ideal for both academic purposes and industry applications.

Key features of Surpac relevant to open pit design include:

- Interactive pit modeling and visualization
- Optimization algorithms for pit shell selection
- Geotechnical analysis tools
- Slope stability and design features
- Integration with other modules like scheduling and reporting

Pros of using Surpac for open pit design:

- User-friendly interface with customizable workflows
- Supports large datasets with efficient processing
- Integration of geological, geotechnical, and economic data
- Widely adopted in the mining industry, ensuring good community support

Cons:

- Licensing costs can be high for small organizations
- Steep learning curve for advanced features
- Some users report occasional software stability issues with large projects

Getting Started with Surpac for Open Pit Design

Installing and Setting Up Surpac

Before diving into the design process, ensure that you have the latest version of Surpac installed and properly licensed. The setup usually involves:

- Installing the software and license server
- Configuring workspace directories
- Importing initial geological and topographical data

Importing Data

Effective open pit design depends on accurate data input:

- Topographical Data: Import surface files like DEMs or contour maps.
- Geological Data: Import drill hole data, wireframes, or block models.
- Resource Data: Incorporate grade models and mineral resources.
- Geotechnical Data: Input parameters for slope stability analysis.

Surpac supports various data formats such as DXF, CSV, LAS, and proprietary formats, making data integration straightforward.

Creating a Geological Model

A robust geological model forms the foundation of open pit design. Use Surpac's modeling tools to:

- Generate wireframes representing ore bodies and waste zones.
- Validate geological interpretations through visualization.
- Cross-check data consistency and completeness.

Once the geological framework is established, proceed to resource estimation and block modeling if needed.

Designing the Open Pit in Surpac

Creating the Initial Pit Shell

The primary step in open pit design involves defining the ultimate pit outline or shell:

- Use the Pit Optimization tool, which employs algorithms like Lerchs-Grossmann or Whittle methods, to generate optimal pit shells based on economic parameters.
- Input parameters such as:

- Mineral prices
- Mining costs
- Processing costs
- Recovery rates

- Cut-off grades

- Generate multiple pit shells with varying economic assumptions to evaluate different scenarios.

Analyzing Pit Shells

Evaluate the generated shells by:

- Comparing sizes, depths, and shapes.
- Assessing economic viability.
- Considering environmental and safety constraints.

Select the most suitable shell as the basis for detailed design.

Designing the Final Pit Outline

Refine the selected shell:

- Adjust slopes based on geotechnical data.
- Add berms and benches.
- Incorporate haul roads and access points.
- Use Surpac's editing tools for precise modifications.

Geotechnical and Slope Stability Analysis

Ensuring slope stability is vital for safety and operational efficiency:

- Utilize Surpac's geotechnical modules to input parameters like material strength, cohesion, and friction angles.
- Perform stability analyses, including limit equilibrium methods.
- Design slope angles that balance safety with economic extraction.

Features:

- Visualize potential failure surfaces.
- Adjust slope designs interactively.

- Export stability reports for further review.

Pros:

- Integrated analysis reduces workflow complexity.
- Visual feedback aids decision-making.

Cons:

- May require supplementary geotechnical software for advanced analysis.

Final Pit Design and Scheduling

Once the geometry and stability are finalized:

- Generate detailed 3D models of the final pit.
- Create cross-sections and longitudinal profiles.
- Export models for use in scheduling and simulation modules.

Surpac's integration with scheduling software allows for:

- Sequencing of pushbacks or phases.
- Optimization of stripping ratios.
- Cost estimation and resource allocation.

Reporting and Documentation

Effective communication of the design process involves:

- Generating reports on pit geometry, volume calculations, and geotechnical parameters.
- Exporting visualization outputs for presentations.
- Documenting assumptions and parameters used for future reference.

Surpac provides customizable report templates and visualization tools to facilitate this.

Best Practices and Tips for Using Surpac in Open Pit Design

- Data Accuracy: Start with high-quality, validated data to ensure reliable results.
- Scenario Analysis: Always generate multiple pit shells with different parameters to evaluate trade-offs.
- Geotechnical Integration: Incorporate geotechnical data early to inform slope designs.
- Iterative Approach: Revisit and refine designs based on stability analyses and economic assessments.
- Stay Updated: Keep Surpac updated to access new features and improvements.
- Training and Community Support: Leverage tutorials, webinars, and user forums for continuous learning.

Conclusion

The Open Pit Mine Design Surpac Tutorial provides a comprehensive roadmap for mining professionals seeking to leverage Surpac?s capabilities for efficient and safe open pit planning. By understanding the software?s core functionalities?from data importation and geological modeling to optimization, slope analysis, and detailed design?you can develop a well-informed, optimized pit layout tailored to project-specific constraints and objectives. While Surpac offers powerful features, success ultimately depends on the quality of input data, thoughtful analysis, and iterative refinement. With diligent application of best practices, Surpac becomes an invaluable tool in the open pit mining engineer?s toolkit, enabling effective decision-making and project success.

Note: As software tools evolve, always refer to the latest Surpac documentation and industry standards to ensure compatibility and best practices.

QuestionAnswer What are the key steps involved in designing an open pit mine using Surpac? The key steps include data import and preparation, geological modeling, pit optimization, designing the ultimate pit outline, detailed pit slope design, scheduling, and final reporting. Surpac provides tools for each of these steps to facilitate comprehensive open pit mine design. How can I perform pit optimization in Surpac for open pit mine design? Surpac offers integrated pit optimization tools such as Whittle (if integrated) or through exporting data to external optimization software. The process involves defining block models, setting economic parameters, and running optimization algorithms to determine the most profitable pit shells. What are best practices for creating accurate geological models in Surpac for open pit design? Best practices include thorough data validation, proper sampling techniques, using appropriate interpolation methods, and integrating multiple data sources. Regularly updating models with new data and maintaining clear documentation ensures accuracy in the geological modeling process. Can Surpac assist with slope design and stability analysis in open pit mines? Yes, Surpac provides tools for designing pit slopes, including defining slope angles and stability parameters. For detailed stability analysis, it can be integrated with specialized geotechnical software or used in conjunction with other tools for comprehensive slope stability assessment. How does Surpac facilitate the creation of detailed 3D models for open pit mine planning? Surpac allows users to generate detailed 3D models of ore bodies, waste dumps,

and pit shells through its robust modeling environment. These models help visualize the mine design, optimize layouts, and assist in planning and scheduling activities. What are some common challenges faced when designing open pit mines in Surpac and how can they be overcome? Common challenges include data inconsistencies, complex geology, and optimizing pit shells. Overcoming these involves thorough data validation, iterative modeling, consulting geotechnical experts, and using multiple scenarios to ensure robust design decisions. Is it possible to integrate Surpac with other mining software for comprehensive open pit mine planning? Yes, Surpac supports data exchange with various mining software such as Whittle, MineSched, and third-party GIS tools. This integration enables seamless workflows from geological modeling to optimization, scheduling, and reporting. Are there any recommended tutorials or resources to learn open pit mine design in Surpac? Yes, Dassault Systèmes and other mining training providers offer official Surpac tutorials and courses. Additionally, online platforms like YouTube, mining forums, and user manuals provide step-by-step guides and practical examples for open pit mine design in Surpac.
