- Run the camera's video and power cables through the trunk or rear hatch to the front dashboard area.

2. Connecting Power and Ground

- Power (VCC) Connection:
 - Identify the reverse light wiring in your Infiniti G35. This can be found by accessing the tail light assembly.
 - Use a T-tap connector to tap into the reverse light's positive wire (+12V when reverse is engaged).
 - Connect the camera's power wire to this tapped wire.
 - Alternatively, run a wire to the vehicle's fuse box, connecting to the reverse light fuse, but this method is less straightforward.
- Ground (GND) Connection:
 - Connect the camera's ground wire to a clean, unpainted metal part of the vehicle chassis.
 - Ensure a solid connection for reliable operation.

3. Connecting the Video Signal

- Run the RCA video cable from the camera to the front of the vehicle, where the head unit or aftermarket monitor is located.
- Connect the RCA plug from the camera to the video input port on your display.

4. Wiring the Trigger Signal (Optional, if applicable)

- Some cameras or head units require a trigger wire to activate the display when reverse is engaged.
- Connect the camera's trigger wire, if present, to the reverse light circuit or a dedicated reverse trigger output from your head unit.
- This ensures the camera feed activates automatically when shifting into reverse.

5. Connecting to the Display Monitor

- If your monitor supports composite video input, connect the RCA cable from the camera to the monitor's video input.
- Power the monitor as per its installation instructions, often tapping into the vehicle's 12V power supply.
