Key Topics in Classical Mechanics for One Mark Questions

Classical mechanics encompasses several core topics. The following sections highlight common questions and their answers, categorized for clarity.

Basic Concepts and Definitions

- What is Newton's first law of motion?

Newton's first law states that an object at rest remains at rest, and an object in motion continues in motion with a constant velocity unless acted upon by an external force.

- Define inertia.

Inertia is the tendency of a body to resist changes in its state of motion or rest.

- What is momentum?

Momentum is the product of mass and velocity of a body, expressed as $p = mv$.

- State Newton's second law of motion.

Newton's second law states that the force acting on a body is equal to the rate of change of its momentum, $(F = \frac{dp}{dt})$. For constant mass, it simplifies to $(F = ma)$.

The SI unit of force is the Newton (N).

Laws of Motion and Applications

- What is the law of conservation of linear momentum?

The total linear momentum of an isolated system remains constant if no external force acts on it.

- Define work done by a force.

Work done is the product of force and displacement in the direction of the force, $(W = Fd)$.

- What is the principle of conservation of energy?

Energy cannot be created or destroyed; it can only be transformed from one form to another.

- What is the law of conservation of momentum?

The total momentum before and after an interaction remains constant if no external forces act.

It is the weighted average of the velocities of all particles in the system, given by $V_{cm} = \frac{\sum m_i v_i}{\sum m_i}$.

- How does the center of mass move in the absence of external forces?

It moves with constant velocity in a straight line.

Rotational Motion

- What is moment of inertia?

It is a measure of an object's resistance to changes in its rotational motion, depending on mass distribution relative to the axis of rotation.
