SMACNA provides tables and formulas to determine maximum support spacing, which typically ranges from 4 to 10 feet depending on duct size and support type.

Types of Supports

SMACNA outlines specific types of supports suitable for various conditions:

- Hangers: Devices that suspend ductwork from structural elements like beams or ceilings.
- Straps and Bands: Used for smaller ducts or as secondary supports.

- Bridging and Cross Bracing: To prevent lateral movement and maintain alignment.
- Sleeves and Anchors: For securing supports to structural components.

Support Materials and Hardware

Supports must be constructed from durable, non-corrosive materials compatible with duct materials and environmental conditions. Common hardware includes:

- Steel or stainless-steel rods and hangers
- Spring hangers for vibration isolation
- Insulated supports for thermal or acoustic purposes
- Bolts, nuts, and washers that meet industry standards

SMACNA Duct Support Details: Step-by-Step Implementation
