2. Conservation of Momentum

This experiment explores elastic collisions between carts or pendulums.

- Experiment Objective: Verify the conservation of momentum and kinetic energy in elastic collisions.
- Procedure Highlights: Measure initial velocities, conduct collisions, and record final velocities.
- Sample Answer: Use momentum formulas $(p = mv)$ and kinetic energy $(KE = \frac{1}{2}mv^2)$ to compare initial and final values, demonstrating conservation principles.

3. Rotational Motion and Moment of Inertia

Students investigate rotational dynamics using rotating disks or beams.

- Experiment Objective: Calculate the moment of inertia for various objects and compare with theoretical predictions.
- Procedure Highlights: Measure angular acceleration under applied torque.
- Sample Answer: Use the relation $(\tau = I\alpha)$, where (τ) is torque, (I) is moment of

inertia, and α is angular acceleration. The manual guides through data analysis to derive I values.
