A robust financial model begins with a solid grasp of the three primary financial statements:

- Income Statement (Profit & Loss Statement): Tracks revenues, expenses, and net income over a period.
- Balance Sheet: Details assets, liabilities, and shareholders' equity at a specific point in time.
- Cash Flow Statement: Shows cash inflows and outflows, categorized into operating, investing, and financing activities.

MBA notes emphasize how these statements interrelate, particularly the linkage between net income, cash flows, and balance sheet items, and how to project each component based on historical data and assumptions.

- Building a Financial Model Step-by-Step

MBA notes often follow a systematic approach:

- Historical Data Collection: Gathering past financial statements for trend analysis.
- Assumption Development: Defining growth rates, margins, and cost structures based on industry research.
- Forecasting Financial Statements: Using assumptions to project future revenues, expenses, capital expenditures, and financing costs.

- Discounted Cash Flow (DCF) Analysis: Calculating the present value of projected free cash flows using an appropriate discount rate.
- Comparable Companies Analysis: Valuing a firm based on how similar companies are priced.
- Precedent Transactions: Analyzing past acquisitions to determine valuation multiples.

MBA notes delve into the nuances of each method, including selecting appropriate multiples, adjusting for non-recurring items, and performing sensitivity analysis.

- Scenario and Sensitivity Analysis

Financial models often rest on assumptions that carry uncertainty. MBA notes teach students how to:

- Create different scenarios (best case, base case, worst case)
- Use data tables and Excel tools to perform sensitivity analysis
- Understand how changes in key variables impact valuation and financial outcomes

These techniques help decision-makers grasp potential risks and rewards.
