Sample OET Writing Task for Nurses

Scenario:

You are a nurse caring for an elderly patient who has recently undergone surgery. Write a referral letter to the patient's general practitioner (GP) informing them about the patient's condition, recent assessments, and recommendations for ongoing care.

Sample Answer:

Dear Dr. Thompson,

I am writing to inform you about Mr. John Carter, a 78-year-old patient under my care following his recent hip replacement surgery. Mr. Carter was admitted to our facility on March 15th, and the procedure was successfully performed without complications.

Since surgery, Mr. Carter has been monitored closely. Postoperative assessments indicate adequate pain control, and he is mobilizing with assistance. His vital signs remain stable, and there are no signs of infection or other complications. He has a history of hypertension and type 2 diabetes, both of which are well-managed.

During his stay, we encouraged early mobilization and provided wound care. The surgical site is healing well, with no signs of redness, swelling, or discharge. We have also begun patient education on activity restrictions and wound care at home.

For ongoing recovery, I recommend continued physiotherapy to improve mobility and strength. Please monitor his blood pressure and blood sugar levels regularly and review his medication regimen as needed. I will update you on any further developments.

Please do not hesitate to contact me if you require additional information.

Yours sincerely,

Sample Response:

Dear Dr. Johnson,

Re: Mrs. Jane Smith, aged 65

I am writing to refer Mrs. Jane Smith, who has been under my care for the management of her diabetic foot ulcer. Mrs. Smith has a 10-day history of a painful ulcer on the plantar surface of her right foot. She has a known history of poorly controlled type 2 diabetes mellitus and peripheral neuropathy.

On examination, the ulcer measures approximately 2 cm in diameter, with surrounding erythema and mild swelling. The wound bed appears yellowish, indicating possible infection. Her vital signs are stable; however, her recent blood glucose readings have been consistently elevated, averaging

15 mmol/L.

In the past week, I have been dressing the wound with saline-soaked gauze and advising strict foot care. Antibiotics have not been initiated yet, pending assessment. She reports some increased pain and difficulty walking.

Given the severity of the ulcer and risk of progression, I recommend a specialist assessment for possible debridement and further vascular evaluation. Please advise on the next steps for management.
