These questions often test conceptual understanding.

- Focus on key definitions and distinctions (e.g., fixed vs. variable costs).
- Practice calculations involving contribution margin or break-even points.
- Review formulas regularly to memorize key relationships.

Problem-Solving Questions

These require applying concepts to real-world scenarios.

Approach:

- Carefully read the problem and identify what is being asked.
- Highlight relevant data and assumptions.
- Choose the appropriate formula or analysis method.
- Perform calculations systematically, double-checking for accuracy.
- Clearly interpret the results in the context of the problem.

Essay or Short Answer Questions

These assess understanding of concepts and ability to communicate insights.

- Structure your answers clearly with an introduction, main points, and conclusion.
- Use relevant terminology learned during the course.
- Support your points with calculations or examples when appropriate.

Sample Topics and Practice Questions

Cost Behavior and Classification

Question: Explain the difference between fixed and variable costs and provide two examples of each in an airline company.

Answer Outline:

- Fixed costs remain constant regardless of activity level (e.g., aircraft lease payments, salaries of administrative staff).
- Variable costs change in direct proportion to activity (e.g., fuel costs, maintenance supplies).

Break-Even Analysis

Question: A regional airline has fixed costs of \$500,000 per month. The average contribution margin per flight is \$200. How many flights must they operate to break even?

Solution:

Number of flights = Fixed costs / Contribution margin per flight = $500,000 / 200 = 2,500$ flights.

Budget Variance Analysis

Question: During a quarterly review, the airline's actual maintenance costs were \$150,000, but the standard cost was \$140,000. Calculate the spending variance and discuss potential causes.

Answer:

Spending Variance = Actual - Standard = $150,000 - 140,000 = \$10,000$ unfavorable.

Potential causes include increased labor rates, unexpected repairs, or supplier price increases.

Activity-Based Costing Application

Question: Describe how ABC can provide more accurate product costing in the context of airline ticket pricing.

Answer:

ABC assigns costs based on actual activities driving expenses, such as check-in processing, baggage handling, or in-flight services. This leads to more precise cost information per route or service, enabling better pricing strategies and profitability analysis.

- Cost Behavior and Cost-Volume-Profit Analysis

Understanding Fixed and Variable Costs:

Students should be able to distinguish between fixed costs (those that remain constant regardless of output) and variable costs (those that change directly with production volume).

Contribution Margin Analysis:

Calculating contribution margin per unit and total contribution margin helps in assessing profitability at different sales levels.

Break-Even Point:

Key formula:

\[

$$\text{Break-Even Units} = \frac{\text{Total Fixed Costs}}{\text{Contribution Margin per Unit}}$$

\]

or

\[

$$\text{Break-Even Sales} = \frac{\text{Total Fixed Costs}}{\text{Contribution Margin Ratio}}$$

\]

Students must practice these calculations and interpret what they imply for business strategy.

- Budgeting and Variance Analysis

Mastering Budget Development:

Students should be comfortable preparing various budgets?sales, production, cash, and capital budgets?and understanding their purpose.

Identifying and analyzing variances (favorable or unfavorable) involves understanding causes such as price differences, efficiency issues, or volume discrepancies.

Key Variances to Know:

- Material Price Variance
- Material Quantity Variance
- Labor Rate Variance
- Labor Efficiency Variance
- Overhead Variances

- Costing Methods

Job-Order Costing:

Used for customized products; tracking costs per job. Key concepts include assigning direct materials and labor, and manufacturing overhead using predetermined rates.

Process Costing:

Suitable for mass production; averaging costs over units produced.

Activity-Based Costing (ABC):

Allocates overhead based on activities that drive costs, providing more accurate product costing, especially in complex industries like aerospace.

- Decision-Making Tools

Relevant Costs and Benefits:

Focus on costs and revenues that change as a result of a decision.

Make-or-Buy Decisions:

Analyzing whether to produce internally or outsource.

Special Order Decisions:

Assessing if accepting a one-time order is profitable.

Product Line Analysis:

Deciding whether to continue or discontinue a product based on profitability.
