Sample Questions and Solutions from June 2013 9709 Mechanics Paper 41

Question 1: Particle Motion in a Straight Line

A particle moves along a straight line with acceleration $(a = 2t) \text{ m/s}^2$, where (t) is in seconds. The initial velocity at $(t=0)$ is 3 m/s . Find:

- The velocity at time $(t = 5)$ seconds
- The displacement from $(t=0)$ to $(t=5)$ seconds

Solution:

- Given: $(a = 2t)$, $(u = 3) \text{ m/s}$ at $(t=0)$

- Velocity at $(t=5)$:

$\int$

$$v = u + \int a \, dt = 3 + \int_0^5 2t \, dt = 3 + \left[t^2 \right]_0^5 = 3 + 25 = 28 \, \text{m/s}$$

$\int$

- Displacement (s) from (0) to (5) :

$\int$

$$s = ut + \frac{1}{2} \int_0^t a \, dt^2$$

$\int$

Alternatively, since $(a = 2t)$:

$\int$

$$v = u + at = 3 + 2t \rightarrow s = \int_0^5 v \, dt$$

$\int$

$$\int_0^5 (3 + 2t) dt = \left[3t + t^2 \right]_0^5 = (3 \times 5 + 25) - 0 = 15 + 25 = 40 \text{ m}$$

$$s = \int_0^5 (3 + 2t) dt = \left[3t + t^2 \right]_0^5 = (3 \times 5 + 25) - 0 = 15 + 25 = 40 \text{ m}$$

$$\int$$

Note: This approach exemplifies the typical style and level of detail expected in solutions for Paper 41.

Detailed Examination of Key Questions and Concepts

Question 1: Foundational Calculations and Conceptual Understanding

The first question serves as an entry point, often testing fundamental knowledge such as vector quantities, basic kinematic equations, or simple force calculations. For example, students might be asked to determine the velocity of a particle after a certain time, given initial conditions, requiring application of the equations:

- $v = u + at$
- $s = ut + \frac{1}{2}at^2$
- $v^2 = u^2 + 2as$

This section sets the tone for the paper, ensuring students can recall and manipulate basic formulas accurately.

Question 2: Kinematics and Motion Analysis

This segment typically involves more complex motion scenarios, such as objects moving along inclined planes or in projectile motion. Students may be asked to resolve components of velocity or acceleration, or to derive expressions for displacement under varying conditions.

An illustrative problem might involve a particle moving with uniform acceleration, asking for the time taken to reach a certain velocity or displacement. The key here is understanding how to properly apply the equations of motion in different frames of reference and interpret their physical

significance.

Question 3: Dynamics and Force Analysis

Dynamics questions often involve free-body diagrams, Newton's second law ($F = ma$), and the analysis of forces including friction, tension, and normal forces. For example, a typical problem might involve calculating the acceleration of a block sliding down an inclined plane with friction, requiring students to:

- Resolve forces along and perpendicular to the incline
- Apply conditions for equilibrium or motion
- Incorporate frictional forces using coefficients of friction

These questions assess students' ability to set up equations based on physical intuition and mathematical rigor, and to solve for unknowns systematically.

Question 4: Advanced Applications and Multi-Concept Problems

The final question often combines multiple principles, requiring students to synthesize their knowledge. Examples include analyzing collisions (momentum conservation), work-energy relationships, or oscillatory motion.

A typical problem might involve a projectile bouncing elastically from a surface, requiring calculations of velocities before and after impact, or determining the maximum height achieved. These questions challenge students to think critically, model complex systems accurately, and present solutions logically.
