QuestionAnswer What are the key steps to perform CPR effectively during a first aid emergency? The key steps include ensuring scene safety, checking responsiveness, calling emergency services, opening the airway, checking for breathing, providing chest compressions at a rate of 100-120 per minute, giving rescue breaths if trained, and continuing until help arrives or the person recovers. How do you treat a minor burn at home? Cool the burn with running cold water for at least 10 minutes, remove any tight clothing or jewelry near the burn, cover it with a sterile,

non-stick bandage, and take over-the-counter pain relievers if needed. Seek medical attention for severe burns. What are the signs of choking and how can you help someone who is choking? Signs include inability to speak, cough, or breathe, and possibly clutching the throat. Help by performing abdominal thrusts (Heimlich maneuver) to expel the object, calling emergency services if necessary, and providing CPR if the person becomes unresponsive. How can you prevent falls and injuries in a home safety assessment? Ensure good lighting, remove tripping hazards like loose rugs and clutter, install grab bars in bathrooms, keep walkways clear, and use non-slip mats. Regularly check and maintain stair handrails and flooring. What should you do if someone exhibits signs of a stroke? Act FAST: Face drooping, Arm weakness, Speech difficulty, Time to call emergency services immediately. Keep the person comfortable, note the time symptoms started, and do not give them food or drink. How do you recognize and treat a bleeding wound? Look for signs like blood pooling or pouring out, and apply direct pressure with a clean cloth or bandage to control bleeding. Elevate the wound if possible, keep the person calm, and seek medical help for severe or uncontrolled bleeding. What safety equipment should be kept in a first aid kit? A first aid kit should include adhesive bandages, sterile gauze, antiseptic wipes, scissors, tweezers, gloves, pain relievers, a thermometer, emergency blanket, and instructions for handling common injuries. When is it necessary to seek professional medical help after a first aid incident? Seek professional help if the injury is severe, bleeding doesn't stop, burns cover a large area, signs of head or spinal injury, difficulty breathing, unconsciousness, or if you are unsure about the severity of the injury. What are common safety precautions to prevent poisoning at home? Store chemicals, medicines, and cleaning products out of children's reach, use child-proof locks, read labels carefully, dispose of expired medications properly, and install carbon monoxide detectors.
